Chapter: 1 Developement

Development → Natural
→ Sustainable
→ Individual

- Developement: An act of improving quality of life and making sure that everyone has the preference in what life looks like.
- Developement goals of different catagories of people:-

Catagory of Person	Developement Goals
• Farmer who depend on only rain for growing crops.	Improved irrigation system; crop diversification; drought resistance crops; imerged income
• A rural woman from a land owning family	Imerged agricultural productivity; access to education; enhanced social state.
• Urban Unemployed youth	Employment Opportunities skill developement; career guidance; financial stability
• A boy from a rich urban family	Higher Education; Enterpeneurial ventures; carreer advancements

- These people seek things that are most important for them, i.e that which comfulfill their desires.

- Classification of Countries:-
[In World developement Reports, by World Bank]

2019: [GDP per capita]
$ 49,300 ⟶ Rich country
$ 2,500 ⟶ Poor country

India: $ 6700
Lower middle class income country

Reports

World Bank → World Developement Report → Per Capita Income

UNDP → Human Developement Report → Health facility, Educational facility

Health facility → Life expentancy Rate, Infant Mortality Rate

Educational facility → Literacy Rate, Net attendance Ratio

W.S.

Excercise

Q1 what is the main criterion used by World Bank in classifying different countries? what are the limitations of this criterion, if any?

Ans The World Bank uses the criterion of per capita income for classifying countries. For example, countries with per capita income of US $2500 or less were classified as low income countries. Countries with per capita income US $ 4250 per annum and above in 2019 are classified as high income countries. The limitations of the criterion are:

- Other important factors including literacy rate, infant mortality rate, healthcare are ignored while classifying the countries.
- Information about the unequal distribution of income is not mentioned by the World Bank.
- The economy of the country cannot determine the developement of the country.

Q2 In what respects is the criterion used by the UNDP for measuring developement different from the one used by the World Bank?

Ans The World Bank uses only one criterion, the Per Capita Income but the UNDP uses many criteria which include Per Capita Income, health status (meaning Life Expentancy at Birth) and education (which include Literacy Rate and Gross Enrollment Ratio in Schools).

Q3 Why do we use average? Are there any limitations to their use? Illustrates with your own examples related to developement

Ans Averages are used for comparisons because they present a large amount of data into a single value in a better way than total. Average expresses the central value but total indicates absolute value. In comparisons of countries, average income, indicates the income, a person is likely to earn but total income shows the income of the entire country.

Limitations of Average Income

Average value has its limitations as it avoids/neglects inequality. So, the real situation of improvement is not reflected. While averages are useful for comparison, they also hide disparities.

Illustration Related to Developement

Consider two countries - A and B It is assumed that there are five citizens each.

In country A, the income earned by its 5 citizens are ₹9500, ₹10,500, ₹9800, ₹10200 and ₹10000.

In Country B, the income earned by its 5 citizens are ₹500, ₹500, ₹500, ₹500 and ₹48,000

Average income of both countries is ₹10,000 but it can be clearly seen that income is not equally divided in country B. Only one person is rich while rest of the 4 are poor.

Therefore, average income do not tells how the income is disturbed.

Q4-5mA Kerala, with lower per capita income has a better human developement ranking than Haryana. Hence, the per capita income is not a useful criterion at all and should not be used to compare states. Do you agree? Diescuss.

Ans No, I do not agree that per capita income should not be used to compare states. However, other factors like Infant mortality Rate and Net attendance Ratio should be used to measure overall human developement.

Q5 Find out the present sources of energy used by the people in India. What could be the possibilities fifty years from now?

Ans Persent sources of energy used by people in India are coal, cow dung, Kerosene oil, petroleum, natural gas, LPG, electricity, etc.

Q6 why is the issue of sustainability important for developement?

Ans The issue of sustainableity is important for developement because if the natural resources are not used carefully, they may not be available for future generations. Currently, reckless exploitation of non-renewable natural resources is going on. Since, the stock of natural resources ~~is going on~~ like oil and minerals is limited, developement should not take place at cost of these scarce natural resources, as they are not renewable in the near future.

Q7 "The Earth has enough resources to meet the needs of all but not enough to satisfy the greed of even one person."
How is this statement relevant to the discussion of developement? Discuss.

Ans This statement implies that human biengs are overusing the natural resources of the Earth in the name of developement. Earth provides enough resources to meet the needs of all, but human biengs have become very greedy as they resort to activities like deforestation, using unsustainable fuel wood and fodder extraction, shifting cultivation, encroachment into forest lands, indiscriminate use of agro-chemicals, extraction of groundwater in excess of recharge capacity, etc.

Q8 List a few examples of environmental degradation that you may have observed around you.

Ans Some examples of environmental degradation that have been observed are:

- Soil erosion
- water pollution by use of chemical fertilizers and pesticides.
- Late Groundwater depletion
- Watch Air pollution and noise pollution by vehicles and factories.
- Simran 30/7/24 Felling of trees.
- Garbage dumps

Sh:) Worksheet

Very Short Answer Questions

Ans-1 To ensure international comparison using a common currency for accuracy.

Ans-2 No Proper Implementation, awareness and accessibility are also crucial factors.

Short Answer Questions

Ans-1 Economic Income can be shown by per capita income, literacy rate, life expantacy rate, employment rate. These factors reflect economic prosperity, education levels and health.

Ans-2 Despite high per capita income, the middle east faces income inequality, Political instability and limited human developement like education and healthcare.

Long Answer Questions

Ans-1 The Human Developement Index (HDI) is a composite Index to measure national developement.

- It is measured by UNDP.
- These major indicators are life expantancy rate, education level, and per capita income.
- These indicators evaluate the overall well being of citizens.
- HDI helps assess inequality & developement progress.

Ans-2 Sustainable economic development focuss on meeting current needs without harming future generations.

- Measures to control environmental degradation include:
  - * Afforestation to prevent deforestation.
  - * Reduction in carbon emissions through renewable energy.
  - * Water Conservation to protect resources.
