DELHI PUBLIC SCHOOL JANKIPURAM, LUCKNOW

SESSION 2025-2026 : WORKSHEET-1

Subject: Science (086) Biology

Chapter: 1 – LIFE PROCESSES

Date: 1/5/25 Name : Md. Hifzaan Ikram Class / Sec. X D

Section A: Multiple Choice Questions (MCQs)

1. The mode of nutrition in humans is:

a. Autotrophic b. Heterotrophic c. Parasitic d. Saprophytic

2. Which of the following organ is responsible for absorption of nutrients in humans?

a. Stomach b. Large intestine c. Small intestine d. Liver

3. In which part of the human body does anaerobic respiration occur during vigorous exercise?

a. Lungs b. Muscles c. Kidney d. Brain

4. The process by which plants prepare their food is called:

a. Respiration b. Photosynthesis c. Transportation d. Excretion

5. Blood vessels that carry blood away from the heart are called:

a. Veins b. Arteries c. Capillaries d. Venules

6. Which structure in plants is responsible for water transport?

a. Phloem b. Xylem c. Chloroplast d. Stomata

7. The functional unit of the kidney is:

a. Neuron b. Glomerulus c. Nephron d. Ureter

8. Which enzyme present in saliva helps in digestion of carbohydrates?

a. Trypsin b. Pepsin c. Amylase d. Lipase

9. The term "translocation" in plants refers to:

a. Movement of water through xylem b. Transportation of food through phloem

c. Photosynthesis in leaves d. Respiration in roots

10. In humans, the excretory system removes:

a. Oxygen b. Carbon dioxide c. Urea d. Nitrogen

Section B: Assertion-Reason Questions

(Choose the correct option: A) Both A and R are true, and R is the correct explanation of A. B) Both A and R are true, but R is not the correct explanation of A. C) A is true, but R is false. D) A is false, but R is true.)

1. Assertion (A): Photosynthesis occurs in green leaves.
   Reason (R): Chlorophyll absorbs light energy to convert carbon dioxide and water into glucose.

2. Assertion (A): The heart pumps oxygen-rich blood to the body.
   Reason (R): The left ventricle of the heart sends oxygenated blood through the arteries.

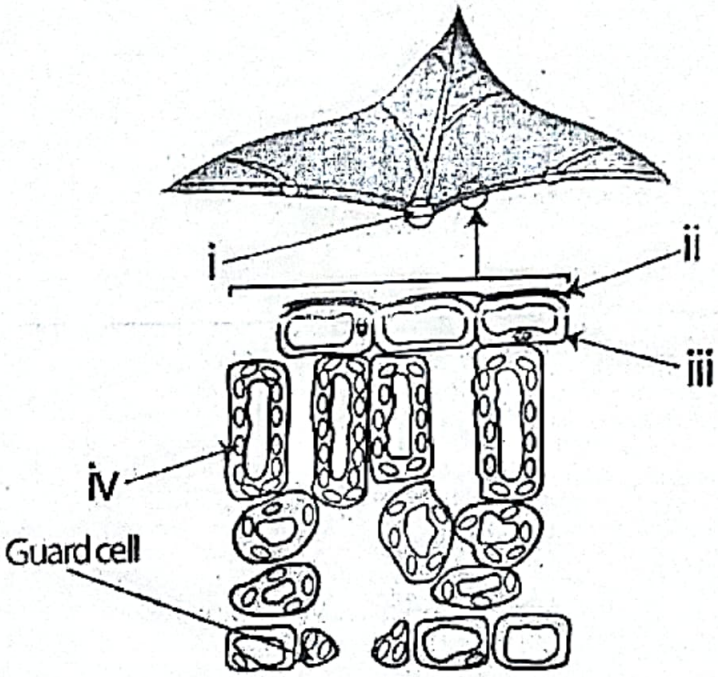
3. Assertion (A): Respiration is a process that releases energy in the form of ATP.
   Reason (R): ATP is synthesized during glycolysis and oxidative phosphorylation.

4. Assertion (A): Veins carry oxygenated blood to the heart.
   Reason (R): Veins have thinner walls and valves to prevent the backflow of blood.

5. Assertion (A): Excretion removes metabolic wastes from the body.
   Reason (R): The kidney filters out harmful substances like urea and ammonia.

Section D: Diagram-Based Questions

1. Draw a labelled diagram of the human respiratory system.
2. Identify and label the parts of a cross-section of a following part of plant showing stomata, mesophyll, and epidermis.



Section E: Case-Based Questions

1. A farmer noticed that his plants were wilting during summer even though he was watering them regularly.

a. What could be the possible reason for wilting?

b. How does the xylem help prevent this?

2. A student observed bubbles released when an aquatic plant was kept in sunlight.

a. What process is responsible for bubble formation?

b. What gas is released?

25 copies.
