1. How is GDP calculated?
2. What are the main advantages of organized sector in respect of employment?
3. What kind of activities come under secondary sector?

Short answer type questions:

1. "Not all the service sector is growing equally well. Only a part of this sector is growing importance." Justify the statement.
2. How far is it correct to say that disguised unemployment can also be called underemployment? Explain.
3. With the example of sugarcane, explain the interdependence of all the three sectors of the economy.

Long Answer type questions:

1. Explain any five differences between public and private sector.
2. Highlight any five benefits of organised sector, with examples.
3. Explain reasons for the rising importance of the tertiary sector in India.

Case study:

1. The topic of whether manufacturing or services should be prioritized as the preferred path for India's economy is a recurring subject of discussion in public forums. During the early years of this century, when India's software exports were experiencing significant growth, there was a question as to why India's services sector couldn't surpass manufacturing in driving the economy forward. This proposition challenged the conventional model of economic development, as most successful economies had prioritized industrial expansion first. It is understandable that Indian economic policy makers felt frustrated. The economic reforms implemented in 1991 primarily focused on manufacturing. However, despite the substantial reduction in tariffs and the dismantling of the bureaucratic system known as the 'licence-permit Raj', the share of manufacturing in the economy did not increase. It is important to note that the significance of India's manufacturing sector should not be solely measured by its size. There has been a qualitative transformation since 1991, with an impressive improvement in the range and quality of products manufactured in India.

a. How different sector agriculture, manufacturing and service are interlink to each other?
b. How do we count the various goods and services and know the total production in each sector?
